

The threat is real. And specific to you.

Cyber risk in agriculture has evolved.

Agriculture is increasingly digital, and increasingly targeted by cyber criminals. A single cyber incident can compromise financial systems, expose borrower data, disrupt cashflow, and enable fraud.

Cybersecurity by SunStream. Purpose-Built for Farm Credit.

Farm Credit institutions face growing cyber threats while balancing limited internal resources, constrained budgets, and high expectations for operational integrity. FieldSafe Cyber Defense™ provides the expertise and continuous protection to close that gap without unnecessary complexity.

***Not just a technology risk —
cybercrime is a business continuity and financial risk.***

Financial Systems are Direct Targets

Farm Credit institutions increasingly rely on digital systems to originate and service loans.

- Cyberattacks can expose sensitive borrower data and enable fraud or identity theft
- Ransomware can halt loan processing and disrupt cash flow
- Breaches can trigger regulatory exposure, legal liability, and reputational damage
- A single compromised entity can disrupt downstream operations

Small and Mid-Sized Organizations are the Most Exposed

Many lenders operate with:

- Limited cybersecurity resources
- Aging infrastructure and legacy systems
- Minimal monitoring or incident response capabilities

Agriculture is a Critical Infrastructure Target

Food and agriculture systems are essential to economic and national stability.

- Cyber threats to agriculture are increasing in scale and sophistication
- Disruptions can affect food availability, pricing, and broader economic stability
- Threat actors, including organized criminal groups, actively target the sector

How We Work With You

SunStream deploys managed services that ensure seamless onboarding, continuous coverage and rapid response.

1 START THE CONVERSATION

We take time to understand your organization, your team, and your current security posture.

2 MAP THE EXPOSURE

We assess where the real dangers exist across your systems, operations, and people.

3 BUILD THE PLAN

We prioritize gaps and design a practical roadmap your institution can execute.

4 PROTECT & MONITOR

We deploy managed services that provide continuous coverage and rapid response.

Our Service Offerings

FieldSafe Cyber Defense™ is a suite of modular products and services provided by SunStream Business Services. We don't just hand you an audit report and tell you what to do. We partner with your team to execute a plan, implement critical controls, and measurably reduce your risk. You can select the precise capabilities your institution requires:

- **24/7/365 Security Operations Center (SOC).** **Protect** your business before risks become breaches with AI-powered, real-time threat detection and expert security operations.
- **Security Awareness Training & Phishing Simulation.** **Transform** your employees into your strongest line of defense through tailored education programs that drive lasting behavior change.
- **Cybersecurity Assessments.** **Uncover** hidden vulnerabilities and build a logical, budget-friendly roadmap to improve your overall cyber posture.
- **Tabletop Exercises (TTX).** **Test** your readiness against the most realistic simulated attacks available, custom-built using real threat profiles and Open-Source Intelligence (OSINT) specific to your environment.
- **vCISO Retainers.** **Lead** your strategic security initiatives with an experienced, fractional Chief Information Security Officer backed by the full knowledge and power of SunStream.
- **Vulnerability & Patch Management.** **Eliminate** liabilities before they are exploited through continuous scanning, proactive patching, and expert remediation assistance.
- **Incident Response.** **Resolve** cyber crises quickly and confidently. We turn chaos into control by providing elite incident commanders to manage seamless cross-organizational coordination.
- **Consulting and Advisory Services.** **Achieve** FCA Rule 609 compliance and ensure cyber insurability readiness with targeted, future-focused strategies from our deep bench of experts.

Cost Structure & Flexible Engagement

FieldSafe operates on a flexible, consumption-based model tailored to your budget and operational needs.

- **Recurring Subscriptions.** Monthly modular subscriptions for co-managed services, including SOC monitoring, security awareness training and vCISO support.
- **One-Time Engagements.** A la carte pricing for discovery, tabletop exercises, and full or quick cybersecurity assessments.

Start the conversation.

The first step is a candid discussion about where your institution stands, where the risks are greatest, and what closing those gaps realistically requires. No pitch. No pressure. Just clarity.
